TIME TO WINTERIZE YOUR HOME

With dropping temperatures, winterizing helps to protect your investment and keep you warm and dry. Prevent plumbing freezes by draining and shutting off your exterior hoses and insulating exterior pipes. Winterizing your evaporative cooler can save thousands in repairs, turn off the power and water supply to your unit. Make sure to drain water from the tubing and the pan and then cover it for the winter. Remove debris from your roof and gutters and foundation.

If you haven't already, prepare an emergency power outage kit complete with bottled water, food, pet food, medications, and blankets in a dry easy to access location.

It is also a good time to get your heating unit checked or your wood stoves, pellet stove and fire places cleaned and ready to go. Have your chimney cleaned and inspected once a year. Have your wood stacked away from your home and outbuildings. Hoping you and your family have a safe and happy winter season.
